

UBER RIDE ANALYTICS DASHBOARD

POWER BI BASED DATA VISUALIZATION & ANALYSIS

GROUP 7

Facing the problem

- Ride-hailing platforms generate massive volumes of booking data daily.
- Without proper analysis, it becomes challenging to identify booking trends, cancellation patterns, revenue performance, and customer behavior.
- This lack of insight limits data-driven operational and strategic decision-making.

DATA PREPARATION STEPS

- Imported the dataset into Power BI.
- Checked and ensured data quality (missing values & duplicates).
- Standardized data types and formats.
- Created key calculated measures for analysis.
- Prepared the data for interactive dashboard visualization.

DATASET SOURCES

- **Source:** Kaggle (Uber Ride Analytics Dataset.)
<https://www.kaggle.com/datasets/yashdevladdha/uber-ride-analytics>
- **Domain:** Transportation/Ride hailing industry
- **Format:** CSV
- **Records:** Approximately 147,000
- **Variables:** 21

KEY INSIGHTS

- The majority of bookings are successfully completed, indicating strong overall operational performance.
- Cancellation levels remain significant and require strategic attention.
- Driver-initiated cancellations appear more prominent than customer-initiated ones.
- Revenue performance is stable with certain vehicle categories contributing more significantly.
- Digital payment methods are widely preferred by customers.
- Customer satisfaction levels are consistently high across most periods.
- Booking patterns fluctuate over time, suggesting seasonal demand variations.

THANK YOU!
